# IMPORTANT

Please read all of the instructions before installation

This faucet is designed for equal and unequal pressure systems.

This faucet is not recommended for use in uncontrolled heating systems such as wet-backs or solar heater units unless a tempering valve is fitted.

All pipe-work must be thoroughly flushed prior to installation of the mixer. In-line filters must be installed on both hot and cold supplies to prevent foreign particles damaging the ceramic cartridge.

**NOTE: It is the responsibility of the installer to ensure a water proof seal is achieved between the escutcheon and finished surface of the wall. In any doubt about the quality of the seal the escutcheon should be removed and then reinstall using silicon to ensure a seal is achieved.**
